Bodyrade: “Locked In Fresh.”

3D cinematic static post · Instagram and Facebook feed · 1080 × 1350 (4:5) · an exploded view of the Bodyrade® Mixology Bottle

CONCEPT

The idea

The Mixology Bottle, taken apart in mid-air. On the same dark navy set as your video, the cap, the capsule, the bottle and the base float apart on one straight line, like a product engineer’s exploded drawing brought to life. The capsule in the middle glows with Orange & Mango powder, the only warm light in the frame.

Each part gets one thin yellow leader line and one job, taken straight from your “How it works” steps. A small card hanging off the capsule lists the exact 5-in-1 formula. The headline is your own line from the website: **LOCKED IN FRESH.**

HEADLINE

LOCKED IN FRESH.

SIGN-OFF

ONLY MIX IT FRESH. Register for a sample.

What I found

- **Website (bodyrade.com):** the bottle works in four steps: load the capsule from the sachet or tub, insert it onto the bottle’s neck, open the base and fill with ice-cold water to the line, then open the cap and shake. The site lists the benefits as “Airtight compartments”, “No clumping, no potency loss” and “Mix it only when you’re ready to lift”. Each 10g serving has 5g Creatine, 2.5g Citrulline Malate, 1.5g Beta-Alanine, 200mg Caffeine and 200mg L-Theanine. The flavours are still “coming soon”, so the call to action stays “Register for a sample”.
- **Your earlier post, “Twist. Drop. Fresh.”:** it shows the moment of use, with the bottle assembled and the capsule dropping. This post shows the other half of the story, the engineering behind it. Your reference pack already includes an exploded-view render of the bottle, so it can be the starting point.
- **Pinterest:** exploded-view product posters (headphones, speakers, cameras, phones, even a water bottle) are a popular format: parts stacked on one axis, thin leader lines and small spec labels. Pre-workout ads, by contrast, are almost all a tub with fire, smoke, splashing fruit or a shouting athlete. None of the pre-workout ads in the search used an exploded view.

Why it works

- **It shows how it works in one look.** People can see where the powder lives, where the water goes and why the two never meet until you open the cap.
- **It earns a save.** People save “how it’s made” images to study later, and the slow read keeps them on the post longer.
- **It stays on-brand.** The navy set, cold blue light, Bodyrade yellow and the flavour colour make it look like the same campaign as the video and the first post.
- **It’s new for the feed.** It’s the first post to show every part of the bottle and the full formula together.

LAYOUT PREVIEW

1. **LOCKED IN FRESH.** Your website's own line, in the same heavy italic as the first post: white, then yellow.
2. **The exploded bottle.** Cap, capsule, bottle and base float apart on one dashed axis, with even gaps, like an engineer's drawing.
3. **Callouts 01–04.** One job per part, in a few words each, all taken from your "How it works" steps.
4. **The 5-in-1 card.** The exact formula per 10g serving, hanging off the capsule it lives in.
5. **One warm light.** The Orange & Mango powder glows inside the capsule; everything else is cold blue.
6. **Sign-off.** The real logo file, ONLY MIX IT FRESH. and "Register for a sample · link in bio".

This preview is a quick vector sketch for layout and copy. The final post is a high-resolution 3D render of the real bottle parts.

VISUAL DIRECTION

- **Set:** the navy-to-black backdrop and cold blue glow from your video, with a faint blueprint grid and a few dimension ticks at very low opacity.
- **Camera:** straight-on with a gentle three-quarter turn so the threads show. Everything is sharp, as in a technical render.
- **Parts:** four parts on one vertical axis with equal gaps, perfectly aligned. Nothing tilts or spins: the calm order is what makes exploded views satisfying. Thin yellow leader lines end in a small dot on each part; add them in design as crisp vector lines.
- **Light:** a cold blue rim light from behind, a soft top light on the black parts so the ribs read, and the orange glow from the capsule as the only warm accent.
- **Colour:** navy and black, Bodyrade yellow #F5C400 (from your logo file) and the flavour colour. Swap the powder colour for crimson (Sour Raspberry) or green (Sweet Pear) to make a version per flavour.
- **Type and safe area:** heavy italic sans for the headline (the preview uses Montserrat Black Italic, close to your pack lettering) and Jost, your website font, for the callouts. Keep text and the logo 60 px from the edges, because the profile grid crops 4:5 posts to 3:4.

HOW TO MAKE IT

- **3D route (best quality):** start from your exploded-view render or the bottle's CAD files. Separate the four parts along one axis in Blender or Cinema 4D, add the glowing powder inside the capsule, and render on the navy set. Add the grid, leader lines, callouts, card, headline and real logo in Photoshop or Figma.
- **AI route (fastest):** AI image tools often invent extra parts or redraw threads and caps wrongly, so don't let AI draw the bottle from scratch. Generate the set, lighting and glow with the prompt below, attach your exploded render as the reference, and composite the real bottle parts on top. Then add all the text in design.

AI image prompt (attach your exploded-view render as a reference)

> Cinematic 3D product render, 4:5. An exploded view of a sports bottle, floating in mid-air on one vertical axis with even gaps between the parts. From top to bottom: a small black ribbed screw cap with a carry loop; a short clear capsule filled with glowing orange powder; a clear bottle with a black ribbed collar at the neck, filled with ice-cold water to a line; a black ribbed screw base. Deep navy-to-black background with a cold blue horizon glow and a faint blueprint grid. Cold blue rim light, soft top light on the black parts, the orange powder glowing warmly inside the capsule. Straight-on camera with a slight three-quarter turn, everything in sharp focus, premium technical product render, empty dark space at the top for a headline and on the left for labels. No text, no logos, no labels.

POST CONTENT

On-image text

- **Eyebrow:** BODYRADE® MIXOLOGY BOTTLE · EXPLODED VIEW
- **Headline:** LOCKED IN FRESH.
- **Subline:** Airtight compartments. Mix it only when you're ready to lift.
- **01 The cap:** Open it when you're ready to lift.
- **02 The capsule:** Airtight. Holds your 10g serving until you open it.
- **03 The bottle:** Ice-cold water, filled to the line.
- **04 The base:** Opens to fill. Wash, dry and use again.
- **Card:** 5-IN-1 · 10g: 5g Creatine · 2.5g Citrulline Malate · 1.5g Beta-Alanine · 200mg Caffeine · 200mg L-Theanine
- **Footer:** ONLY MIX IT FRESH. · Register for a sample · link in bio

Caption

Locked in fresh. 🔒

Here's the Bodyrade® Mixology Bottle, part by part.

01 The cap: open it when you're ready to lift.
02 The capsule: airtight. Load your 10g serving straight from the sachet or tub (funnel supplied).
03 The bottle: fill it with ice-cold water to the line, twenty minutes before training.
04 The base: open it to fill, then wash, dry and use it again.

Inside the capsule: 5g Creatine · 2.5g Citrulline Malate · 1.5g Beta-Alanine · 200mg Caffeine · 200mg L-Theanine.

Developed in Sweden. Made in the UK.
Register for a sample: link in bio.

Alt text

An exploded view of the Bodyrade Mixology Bottle on dark navy: a black loop cap, a clear capsule glowing with orange powder, a bottle of water and a black base float apart on one line, with yellow labels and a card listing the 5-in-1 formula. Large text reads "LOCKED IN FRESH." The footer says "Only mix it fresh. Register for a sample, link in bio."

Other sizes

Story, 1080 × 1920: stretch the gaps, move the card under the bottle, and keep text out of the top 250 px and bottom 340 px. **Pinterest pin, 1000 × 1500:** the same layout with a little more space.

COPY CHECK

- The headline, subline, the four part jobs, the formula, "Only mix it fresh", "Register for a sample", "funnel supplied", "twenty minutes before training" and "Developed in Sweden. Made in the UK." all come from bodyrade.com.
- The four parts (cap, capsule, bottle, base) follow the website's "How it works" steps. Check the split against your CAD or exploded render before the 3D work, and use your official part names if they differ.
- The website doesn't say what the bottle is made of, so the copy doesn't name a material. Its "No clumping, no potency loss" is left off the image; with test data, "No clumping" could go into the subline.
- The site's "Blood flow, energy, strength, endurance & recovery" is left off (the UK only allows authorised health claims), as is "World's first multi-patented" unless you can prove it. If any of the image is AI-generated, turn on Instagram's "AI info" label.
